

CONSUEL, his historic commitment ...

Aid the electrical sector to limit the risks of electricity-related accidents. This public interest mission pushed the authorities to establish the CONSUEL in 1964.

Our structure is a non-profit organization which reached the **state-approved body since 2004**. And our mission is to verify the compliance of the electrical installations with the safety standards in effect. We endorse the Certificates of conformity filled in by the person who carried out the work.

The DGEC* supervises our action and fixes the price list concerning our services. Our Board of Directors consists of three categories of members representing the different actors of the electrical sector:

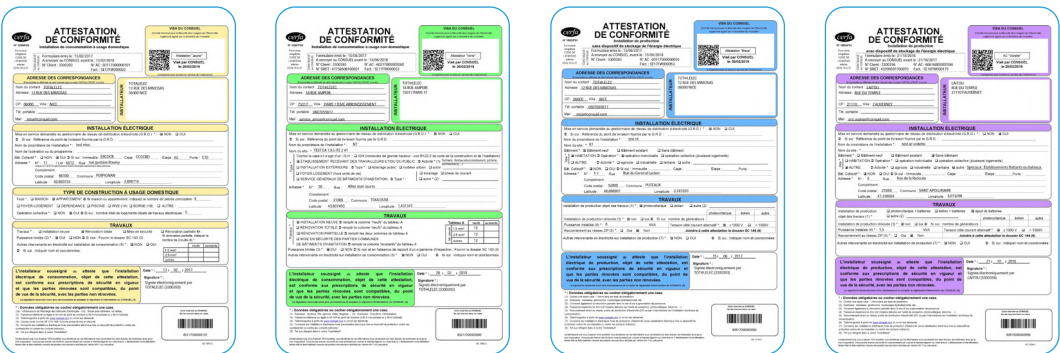

CONSUEL has built a **strong partnership with electrical contractors** through the organization of technical meetings, through the communication of technical information and the help provided for the monitoring of regulatory evolutions. To make their daily life easier, we adapted new technologies in our process and developed efficient online services such as the complete dematerialization of our endorsement process concerning the certificates of conformity.

Since 1998, CONSUEL is an **accredited** inspection body by the COFRAC** according the NF EN ISO/CEI 17020 standard. This official recognition is the evidence of our proficiency and impartiality.

Thanks to the experience and the professional quality of the team, CONSUEL is now recognized as an expert and a **technical advisor** by both the electrical sector and the public authorities. We take part in many working groups on electrical safety including the DHUP, the Ministry of Labor, AFNOR, PROMOTELEC and other organizations.

Certificates of conformity for consumption and production facilities

... Looking forward **to the future**

Shall we end it there?

Today, we operate in a world that is facing unprecedented changes and challenges: new technologies, new uses, the energy transition, etc.

At CONSUEL, we are convinced that these changes cannot be sustainable without electrical safety.

Development of **renewable energies** and photovoltaic self-consumption

Advent of **smart building**

Rise of **green mobility**

In this context, our commitment is clear: to help all actors in the electrical sector to better understand and integrate the implications of these changes for proper electrical safety.

Day by day, we provide and develop our expertise and know-how, carried out by passionate and dedicated men and women, in order to meet together the challenge of a safer and more sustainable world.

With you all, electrical ontractors, electrical energy suppliers and consumers, let's innovate for electrical safety!

Serving everyone for the **electrical safety**

Some key figures concerning our annual activity

900 000

Certificates
of conformity
stamped

185 000

inspections
on site

5 000 000
km

covered

A wide-ranging **expertise** ...

The expertise of CONSUEL in two specific fields, electrical safety and performance of communication/optic fiber network installations has been extended. We offer technical services dedicated to installers, landlords, co-ownerships and energy suppliers :

2 Certificates of Conformity for low-currents

+ than 400 technical training days per year

+ than 3 000 studies on rising columns projects

+ than 200 partnership agreements signed with social landlords in the context of renovation programs of their housing stock

+ than 250,000 electrical installations yearly secured in social housing stock

... On the way to **the energy and digital transitions**

Inspection of **electric vehicle charging infrastructure and photovoltaic self-consumption installations**, with and without batteries

Support in making strategic choices for your low current installations, optic fiber, cable distribution networks and residential communications networks

Decision-support products in asset management of your residential building infrastructures

... And a recognition **beyond the borders** ...

Some countries like Japan, Senegal, Ivory Coast, South Korea signed partnership agreements with CONSUEL base on key points like technical or regulatory expertise.

The international federation FISUEL, of which these countries and CONSUEL are members, allow us to share our experiences. In this context, we develop consulting and training missions. A way to improve the safety of electrical installation at a worwilde level.
